A Message from the President

by Amanda Leightner, PhD, RRT, RRT-SDS, RPSGT, RST, CCSH, FAARC, FNAP

Dear Lambda Beta Members, Educators, and Future Leaders in Respiratory Care,

It is with great pride and gratitude that I continue to serve as President of the Lambda Beta Society, the National Honor Society for Respiratory Care. Each year, I am inspired by the passion, resilience, and commitment that define our members and our profession.

Respiratory care continues to grow in both recognition and impact. As healthcare evolves, so does our role, and respiratory therapists are essential members of the healthcare team. Lambda Beta plays a vital role in this progress by recognizing academic excellence, supporting professional development, and fostering future leaders in respiratory care.

Membership in Lambda Beta represents more than academic achievement and signifies a commitment to excellence, leadership, and the advancement of our profession. For students, it offers recognition, connection, and opportunities that extend beyond the classroom and into their professional careers.

As we look ahead, our focus remains on expanding Lambda Beta's reach and impact. We are working to increase awareness across respiratory care programs, support chapter development, and create more opportunities for student engagement and leadership. For many students, Lambda Beta represents not only recognition of academic achievement but also a gateway to professional growth and connection within our field.

I am continually encouraged by the achievements of our students and the dedication of our educators. Together, we are building a strong foundation for the future of our profession. Thank you to our board members, chapter advisors, and educators for your continued leadership and support. It is an honor to serve alongside you as we work to advance Lambda Beta and the field of respiratory care.

Kind regards,
Dr. Amanda Leightner, PhD, RRT, RRT-SDS, RPSGT, CCSH, FAARC, FNAP

Understanding the Difference

Licensure, Credentials, and Professional Distinction in Respiratory Care

By Amanda Dexter, MS, RRT, FCCP, CHSE

Respiratory care is a profession built on trust, expertise, and accountability. Patients, healthcare teams, and institutions rely on respiratory therapists to deliver complex cardiopulmonary care in some of the most critical moments of a patient's life. Yet within our profession, there is often confusion surrounding two fundamental concepts: professional licensure and professional credentials. While they are closely related, they serve very different purposes in defining competency, legality of practice, and professional achievement.

Understanding these distinctions is essential not only for practicing clinicians but also for students preparing to enter the field. It is equally important for members of professional organizations such as the Lambda Beta Society, the national honor society for respiratory care, which recognizes excellence, scholarship, and leadership within the profession.

Licensure: The Legal Authority to Practice

Licensure is granted by individual state governments and provides the legal authority for a respiratory therapist to practice within that state. Each state establishes its own licensing requirements, regulatory board, and scope-of-practice rules to ensure public safety.

While requirements vary slightly from state to state, licensure typically requires:

- **Graduation from an accredited respiratory care program.**
- **Successful completion of National Board for Respiratory Care (NBRC) examinations.**
- **Submission of an application to the state licensing board.**
- **Payment of licensing fees and compliance with renewal requirements — including completion of continuing education hours, renewal fees, and adherence to professional standards — ensuring respiratory therapists remain current in clinical knowledge and maintain their legal authority to practice.**

The primary purpose of licensure is public protection. By regulating who may legally practice respiratory care, states ensure that only qualified professionals provide cardiopulmonary care to patients.

Without an active state license, even a highly trained respiratory therapist cannot legally practice, regardless of education or national credentials.

Professional Credentials: Demonstrating Competence and Specialization

While licensure grants permission to practice, professional credentials demonstrate competency and expertise. These credentials are awarded by the National Board for Respiratory Care (NBRC) and reflect an individual's knowledge, skills, and clinical proficiency.

Common respiratory care credentials include:

- **CRT (Certified Respiratory Therapist)**
- **RRT (Registered Respiratory Therapist)**
- **ACCS (Adult Critical Care Specialist)**
- **NPS (Neonatal/Pediatric Specialist)**
- **SDS (Sleep Disorders Specialist)**
- **RPFT/CPFT (Pulmonary Function Technologist)**
- **AE-C (Asthma Educator Specialist)**

These credentials signify that a respiratory therapist has met national standards through rigorous examination and validation of professional competency.

Unlike licensure, which is legally required to practice, credentials serve as markers of professional achievement and specialization. They help healthcare institutions identify therapists with advanced skills and support professional growth within the field.

Why the Distinction Matters

For respiratory therapy students and early-career clinicians, understanding the distinction between licensure and credentials is critical for several reasons:

1. **Protecting Professional Integrity- Misunderstanding these terms can create confusion about qualifications and legal authority. Therapists must understand that licensure allows practice, while credentials demonstrate expertise.**

2. **Supporting Career Advancement- Advanced credentials open doors to specialized practice areas such as critical care, neonatal care, pulmonary diagnostics, and sleep medicine.**

3. **Maintaining Public Trust- Clear professional standards reinforce the credibility of respiratory therapists within the healthcare system.**

4. **Promoting Lifelong Learning- The pursuit of credentials encourages therapists to remain engaged in continuing education and professional development.**

The Role of Lambda Beta Society

The Lambda Beta Society plays a vital role in fostering the next generation of respiratory care leaders. As the national honor society for respiratory care, Lambda Beta recognizes students and professionals who demonstrate:

- **Academic excellence**
- **Professional leadership**
- **Commitment to the respiratory care profession**
- **Service to the healthcare community**

Membership in Lambda Beta represents more than scholastic achievement—it reflects a dedication to professional integrity, lifelong learning, and the advancement of respiratory care.
By understanding the importance of licensure and credentials, Lambda Beta members exemplify the values of professionalism and accountability that define our field.

Excellence Beyond the Minimum Standard

Licensure represents the minimum legal standard required to practice respiratory care. Credentials represent verified professional competency. Lambda Beta represents excellence beyond both.
Members of this honor society are not only prepared to meet regulatory requirements but are also committed to advancing the profession through scholarship, leadership, and service.
In an evolving healthcare environment where respiratory therapists are increasingly recognized as essential critical care specialists, understanding professional distinctions is more important than ever. Lambda Beta members are uniquely positioned to lead by example—demonstrating that excellence in respiratory care begins with knowledge, continues with professional credentialing, and flourishes through leadership.

Looking Forward

As respiratory care continues to expand in scope and influence, professionals who understand and advocate for licensure standards, credentialing pathways, and academic excellence will shape the future of the profession.

Lambda Beta Society members embody these ideals. By striving for distinction in education, credentialing, and service, they ensure that respiratory care remains a respected and trusted discipline within healthcare.

Because in respiratory care, professional excellence is not just earned — it is continually demonstrated.

Boise State Celebrates New School of Respiratory Care

By Boise State News

In her white lab coat, Megan Koster, divisional dean of the new School of Respiratory Care Sciences, leads two respiratory care students in a simulated intubation.

Marking 50 years of respiratory care education, the College of Health Sciences is pleased to announce the new School of Respiratory Care Sciences.

School programming, formerly organized as a department within the School of Allied Health Sciences, has come into its own, as has the profession. And grads, supporters, faculty members and current students took the annual alumni and friends celebration as an opportunity to recognize the considerable progress, success and opportunity that the "school" designation signifies.

For Megan Koster, who has chaired the department and now will serve as divisional dean, the recognition is pivotal. She can reflect on both the history of what is now a much-needed, highly sought-after professional skillset, as well as the future of the field and the education that will prepare the respiratory therapists of tomorrow.

When Boise State launched what was then a certificate program, "inhalation therapists," as they were then known, trundled oxygen between rooms in hospitals and clinics. As nursing and more modern medical practices evolved, the scope of practice for these clinical team members changed and evolved as well, over time encompassing learning and techniques having to do with breathing and a variety of therapeutics.

Respiratory therapists, who are specialists in their field with particularly deep knowledge of mechanical ventilation and pulmonary disease management, now must be licensed to practice. They are found in multiple inpatient and outpatient settings, working in cardiopulmonary care, intensive and critical care units, in clinics, on transport teams, with durable medical equipment and in home and specialty care for sleep and pulmonary functions.

The world learned just how critical respiratory care was during the COVID-19 pandemic. Koster would be the first to note that the "slight silver lining" during that prolonged public health crisis was an increased awareness of the profession, the value of a robust team of skilled and certified respiratory therapists — and the critical demand for more of them.

Boise State's programming has been out ahead in the field over the past five decades. Offering first a certificate, then an associate's degree, then a bachelor's degree focused on students entering the profession as the profession matured. The department of respiratory care was one of the first at Boise State to offer online programming, introducing a novel degree advancement program in 2007; an online master's was added in 2018, expanding the program's reach to working practitioners across the world.

Respiratory Care student practices intubating a manikin infant.

"Boise State has really worked to become a leader across the profession," Koster said.

The future is bright for students interested in respiratory care. The U.S. Bureau of Labor Statistics expects demand and employment in respiratory care occupations to grow at a rate of 12% over the next 10 years, a much higher rate than the 3% average for all other occupations. Successful graduates will have plenty of opportunities as older respiratory care therapists retire, aging Baby Boomers face additional health challenges and positions remain to be filled in the wake of COVID and ongoing workforce gaps.

Camille Stover leads a respiratory care lab

Boise State, as Koster notes, offers the only baccalaureate program option for the profession in the state. She and the "GoBronchi" team work closely with partners in local health care to keep instruction current and relevant. But Boise State's is also the largest respiratory care department in the world, largely because of its degree advancement program, which has about 400 enrollees at any given time. The master's degree is one of the few graduate degrees in respiratory care in the country.

Respiratory Care students calculate ventilation settings during class.

"We're incredibly lucky here at Boise State to be supported and recognized the way we are," Koster said.

Status as a "school," she said, "allows us to pivot strategically in a way that is unprecedented. It positions us to make strides in research, interprofessional and interinstitutional collaboration, and to expand in many other areas.

"Boise State really has an unmatched reputation for student-centeredness," Koster said. "Everything that we do is focused on the students, their experiences, and how they will move forward in the field.

Two respiratory care students look on as Camille Stover, program director for the On Campus Bachelor of Science in Respiratory Care program, points out a part of intubation tubing.

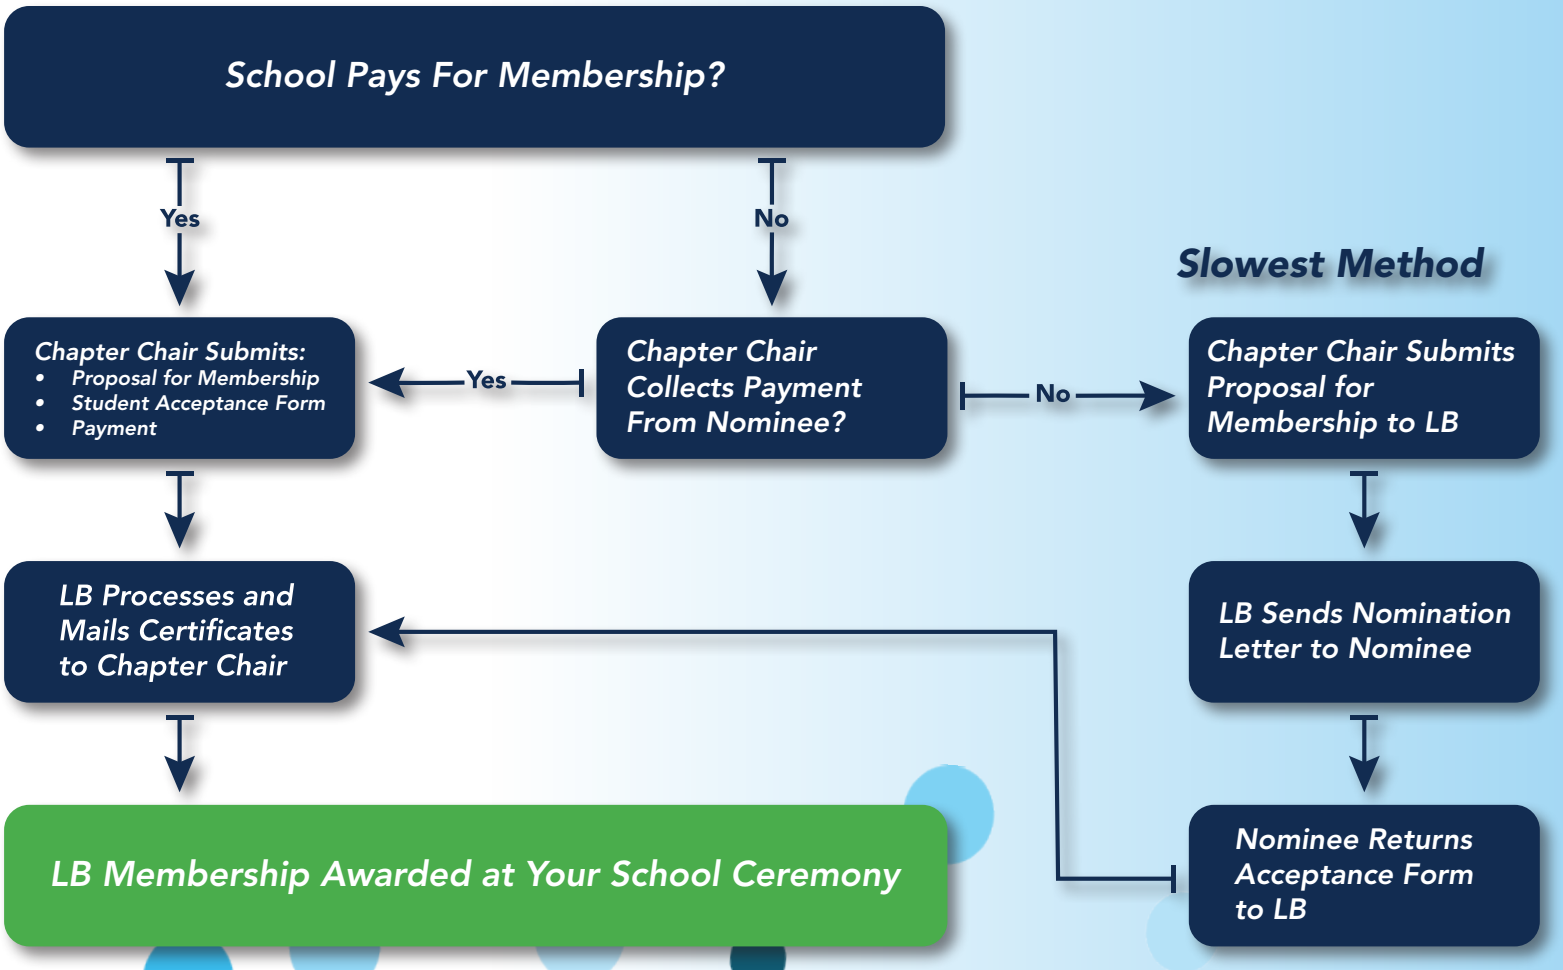

"It's easy to make decisions when you have the needs of the student to guide your mission."

Hence the school rallying cry: Go Bronchi Graduates!

THE PATHS TO LAMBDA BETA MEMBERSHIP

STUDENTS ARE NOMINATED IN TOP 25% OR 3.5 GPA

The Lambda Beta Society is pleased to announce the 2026 Scholarship and Awards Program.

Any student currently enrolled in a respiratory care program at a CoARC-accredited school can apply for these awards. Students do not have to be members of the Lambda Beta Society to apply for these scholarships.

We are offering four scholarships/awards. Each has a different set of criteria and dollar amount. Go to our website page, **Scholarships – Lambda Beta**, for a brief explanation, the application, and additional information on how to prepare a good application. **All applications must be submitted electronically no later than May 31, 2026**.

H. Frederic Helmholz, Jr., MD Scholarship - $2,500

Up to two NBRC Leadership Awards - $5,000 each

Brad Leidich Memorial Scholarship - $1,500

Scholarships will be awarded in November. If you have questions, please contact the Executive Office at 913.440.4475 or lambdabeta@nbrc.org.

aarc Summer forum

Lambda Beta is coming to AARC Summer Forum 2026!

Take some time to stop by the Lambda Beta Booth in the Exhibit Hall. Staff and board members will be available to answer any questions. You can pick up a free mini–Lambda Beta pennant to proudly represent the Society.

Welcome New Lambda Beta Board Members

Glenn R. Pippen II, MBA, RRT

Glenn Pippen is the Director of Respiratory Care Services at Grandview Medical Center in Birmingham, Alabama. He has more than 25 years in respiratory care education, clinical operations, and staff development. During his career, he has served in several volunteer leadership roles with the Alabama Society for Respiratory Care and is currently appointed to the Alabama State Board of Respiratory Therapy. Glenn's contributions to the respiratory care profession include several AARC committee member appointments and service in the House of Delegates. He currently serves as a Director-at-Large on the AARC Board of Directors

Trevor Lee, RRT, MSRC

Trevor Lee is a dedicated healthcare educator and respiratory therapy professional with a passion for advancing clinical excellence and student development. With experience in both critical care and academic settings, he focuses on bridging the gap between theory and realworld practice through engaging, student-centered learning. His work emphasizes critical thinking, adaptability, and preparing future clinicians to thrive in complex healthcare environments. Trevor is honored to be a member of the Lambda Beta Society and remains committed to lifelong learning and leadership within the respiratory care community. currently serves as a Director-at-Large on the AARC Board of Directors

Sheri L. Tooley, BSRT, RRT-NPS, CPFT, AE-C, FAARC

Sheri Tooley is a distinguished respiratory care professional and leader with decades of experience in clinical practice, education, research, and professional service. She began volunteering at the state level in 1988 and went on to serve as President of the New York State Society for Respiratory Care (NYSSRC) in 2002. Her continued dedication to the profession included roles as AARC Sleep Section Chair, NYS Delegate in the House of Delegates (HOD), and Government Affairs Chair.

During her tenure in the AARC House of Delegates, Sheri served two terms as HOD Secretary before being elected to the AARC Board of Directors in 2012. She served as Director-at-Large and later as Vice President for External Affairs for two terms. In 2020, she was elected President-Elect of the American Association for Respiratory Care (AARC), serving as President from 2021 to 2022 and Immediate Past President from 2023 to 2024.

Sheri is a graduate of SUNY Upstate Medical University's Cardiorespiratory Sciences program in Syracuse, New York. Her clinical career spans a wide range of care settings beyond the hospital, including pediatric home ventilator care, diagnostic laboratories, and rehabilitation. She has contributed to multiple research studies involving asthma, cystic fibrosis, pulmonary therapeutics, and risk management strategies for high-risk postoperative patients.

Throughout her career, Sheri has provided leadership and oversight for numerous hospital departments and outpatient clinics, including pediatric pulmonology, pediatric cardiology, pediatric urology, an asthma coalition, and a cystic fibrosis center for 18 years. She also dedicated 12 years as a hospital-based respiratory therapy educator specializing in quality assurance and regulatory compliance, where she developed protocols, competencies, and interprofessional education programs for respiratory therapy students, physicians, nurses, and allied health professionals.

In the final phase of her full-time career, Sheri spent three years in research as a Senior Product Manager before retiring from full-time employment in November 2024.

Awards and Honors

- 2005 NYSSRC Outstanding Affiliate Contributor
- 2010 NYSSRC Sam Runyon Award
- 2010 AARC Sleep Section Practitioner of the Year
- 2010 AARC President's Volunteer Excellence Award
- 2012 Fellow of the AARC (FAARC)
- 2013 NYSSRC Affiliate Contributor of the Year
- 2014 AARC President's Volunteer Excellence Award
- 2016 NYSSRC Affiliate Contributor of the Year
- 2016 AARC Outstanding Affiliate Contributor
- 2018 Lambda Beta Alumni Member
- 2024 AARC Life Member

Sheri's career reflects a lifelong commitment to advancing respiratory care through leadership, education, research, and service.

Individuals must be a member to purchase memorabilia.

THE GIFT OF EXCELLENCE

A Lambda Beta National Sponsorship Initiative

Sponsor a Chapter • Empower a Program • Elevate the Profession

Campaign Overview

Lambda Beta Honor Society recognizes scholarship, leadership, and professionalism among Respiratory Therapy students. The Gift of Excellence Initiative encourages established programs to sponsor schools without a Lambda Beta chapter by gifting a charter membership and providing mentorship support.

Why This Initiative Matters

- *Expands recognition for high-achieving respiratory therapy students.*
- *Encourages mentorship and collaboration between programs.*
- *Strengthens leadership development across the profession.*
- *Elevates the national impact of Lambda Beta.*

How Sponsorship Works

- *Established Lambda Beta chapters sponsor a new program.*
- *Sponsoring programs provide initial charter membership support.*
- *Mentorship helps the new chapter develop leadership and engagement.*
- *Sponsored programs recognize academic excellence and professional service.*

Excellence Shared. Leadership Multiplied.

Get Involved
